

## WHAT TO EXPECT AFTER BANKART REPAIR

Dr. Erik Dorf

Bankart repair surgery is common to my practice and I have found the results to be consistent and reliable. Keep in mind that every person responds differently to surgery and treatment, and your recovery may vary from the below outline. Typical factors which influence the recovery process include:

- Your age and health.
- The severity of your injury/nature of your injury
- The length of time between the injury and the surgery
- Your compliance with prescribed treatment and therapy

1. ***SURGERY DAY:*** Following your surgery you will have a bandage on your shoulder and your arm will be protected in a sling.
2. ***FIRST 48 HOURS AFTER SURGERY:*** Your arm may be numb or asleep for up to 24 hours after surgery. After the first 24 hours following surgery, it is important that you straighten out your elbow for five – ten minutes per hour while you are awake.
3. ***FIRST TWO WEEKS:*** Pain or swelling in the operated area is normal. This can be lessened by the use of an ice pack, by elevating your hand above the level of your heart and by the use of your pain medication. **You will wear your sling at all times during the first four weeks after surgery except while exercising your elbow, performing the exercises learned in therapy, or bathing.**
4. ***AT YOUR TWO WEEK POST OP OFFICE VISIT:*** Your sutures are dissolvable, meaning they will not need to be removed. You will continue to wear the sling. Two weeks from this visit (or 1 month post op) you will begin physical therapy.
5. ***6 WEEKS AFTER SURGERY:*** You will return to the office and we will check your shoulder range of motion. You may begin with a more aggressive physical therapy protocol at this point. This will focus on passive and active motion. You can discontinue your sling at this time.
6. ***THREE MONTHS AFTER SURGERY:*** You will continue with physical therapy. At this point we are looking to finalize your range of motion and continue with strengthening.
7. ***HOW LONG TO GET BETTER?*** Most people are **mostly** better by 6 months and will be progressing with activity as tolerated. It may take up to a year for you to be fully improved.

\*You will be prescribed a **Game Ready** cold therapy compression unit. A representative will be contacting you prior to surgery to coordinate this. Rental of this unit is recommended but it is not required. The unit rental cost is \$250.
